PROJECTS

Ruby Terminal App Assessment

Our first assessment was a Ruby Terminal App Assessment. I created it together with my classmate Jamie Mills. Here's a photo of us presenting our app to the class:

Our app is a shopping list where you can add items and quantities. You can select a category for each of your items. You have an option to view your current shopping list as well. When you're done, you can view your final shopping list and everything's sorted by category.

Looking back I am amazed that we managed to designed and build our app in only two days. It was an amazing experience and I learnt so much. My favourite part besides coding was doing pair-programming.

Presenting our app to the class

My Contact Page

The screenshot shows a web browser window with the title 'My Contact Page'. The address bar displays '127.0.0.1:5500/contact.html'. The browser's tab bar shows three tabs: 'Portfolio | Trello', 'Lelani Parker', and 'Check My Colours - Analys...'. The browser's sidebar on the left shows various application icons. The main content area features a contact form with the following fields:

- First Name:** A text input field with the placeholder text 'Your name..'
- Last Name:** A text input field with the placeholder text 'Your last name..'
- Country:** A dropdown menu with 'Australia' selected.
- Subject:** A large text area with the placeholder text 'Write something..'

Challenges

- CSS
- Redoing my lost work – always push your commits to the cloud!

Enjoyed

- Project Management
- Finally completing my site :)
